

One timeline for every load.

Broker, carrier and shipper looking at the
same thing, from tender to proof of delivery.

● MANUAL BY DEFAULT

Freight runs on phone calls.

A load moving from tender to delivery is coordinated by hand, across calls, texts and a shared sheet. Nobody chose this. It accumulated.

9

Outbound calls to resolve one late load

41 min

Median delay before the shipper is told

3

Systems of record for one load, none of them agreeing

● CONFIGURE ONCE

Set the lane rules once. Every stop updates itself.

- **One timeline per load**

Tender, pickup, every stop, delivery. One record all three parties read.

- **Updates that push themselves**

The carrier marks a stop. The shipper knows, without anyone calling.

- **Exceptions, surfaced early**

A load drifting off plan is flagged while it can still be fixed.

WHY NOW

A trillion-dollar industry coordinated on a phone.

Freight brokerage keeps growing and keeps hiring dispatchers to absorb the coordination. That is the part that does not scale.

One timeline for every load.

● HOW BROKERS OPERATE TODAY

One system, not five tools.

CAPABILITY	CALLS + A SHARED SHEET	POINT TOOLS	MERIDIAN
One record all parties see	By hand	Separate	Built in
Status updates	Manual	Manual	Automatic
Exception alerts	Manual	Varies	Automatic
Shipper visibility	On request	Add-on	Built in

WHO IS BUILDING IT

Built by people who dispatched freight.

Sam Okonjo

Co-Founder & CEO

Commercial and product. Eight years brokering freight before this.

Ana Ruiz

Co-Founder & CTO

Engineering. Built dispatch systems at two logistics companies.

Tom Vance

Head of Revenue

Twenty years in transport sales and carrier relationships.

Priya Nair

Advisor

Former COO of a national 3PL.

Backed by **your investors** · replace this line

The end of the **check call**.

We are raising to put every load on one timeline, for everyone who touches it. Let's talk.
